

Waypoint RINEX Conversion Error

Summary:

Waypoint's conversion utility does not convert RINEX files from 2011.

Products Affected:

All versions of GrafNav/GrafNet, GrafMov, GrafNav Lite and Inertial Explorer.

Region Affected:

Worldwide

Details:

When a RINEX file that contains data collected in 2011 is decoded, the conversion utility returns the message, "Error occurred scanning RINEX file. Unable to detect valid RINEX records". There is no GPB file created.

Solution:

A new build of Version 8.30 is available for all customers who have a license that is entitled to it. Please contact NovAtel Support at support@novatel.com for details. A patch has also been generated for Versions 7.50 to 8.20. The patch must be placed into the software's installation folder, over-writing the existing file.

A patch for versions earlier than 7.50 will not be made available. Customers working with older versions of the software are encouraged to contact NovAtel Sales at sales@novatel.com to discuss upgrade possibilities.

Download Update: Patches for all versions dating back to 7.50 are available from <http://www.novatel.com/support/firmware-software-and-manuals/firmware-software-updates/waypoint/##>.
