HIGH PRECISION GNSS, BACKWARD COMPATIBLE SIZE
The multi-frequency OEM719 offers future ready precise positioning for space constrained applications. Advanced interference mitigation features maintain high performance in challenging environments. Form factor and pin compatible with NovAtel’s popular OEM615™ and OEM617™ receivers, the OEM719 provides the most efficient way to bring powerful Global Navigation Satellite System (GNSS) capable products to market quickly. With centimetre level positioning utilizing TerraStar satellite-delivered correction services, the OEM719 ensures globally available, high performance positioning without the need for expensive network infrastructure. Anywhere. Anytime.

BUILT-IN FLEXIBILITY
The OEM719 uses a 555 channel architecture and can be configured in multiple ways for maximum flexibility. NovAtel’s OEM7® firmware provides users with the ability to configure the OEM719 for their unique application needs. The OEM719 is scalable to offer sub-metre to centimetre level positioning, and is field upgradable to all OEM7 family software options. These options include ALIGN® for precise heading and relative positioning, GLIDE® for decimetre level pass-to-pass accuracy and SPAN® GNSS+INS for continuous 3D position, velocity and attitude. NovAtel CORRECT® with RTK delivers centimetre level real-time positioning, or go base-free for centimetre and decimetre PPP solutions using TerraStar corrections.
