OEM7720™

DUAL-ANTENNA, MULTI-FREQUENCY GNSS RECEIVER DELIVERS ROBUST HEADING AND POSITIONING

HIGH PRECISION GNSS HEADING AND POSITIONING
The dual-antenna, multi-frequency OEM7720 offers future ready precise heading and positioning for space constrained applications. Advanced interference mitigation features maintain high performance in challenging environments. With a variety of interface options to facilitate system integration, the OEM7720 provides the most efficient way to bring powerful Global Navigation Satellite System (GNSS) capable products to market quickly. With centimeter level positioning utilizing TerraStar® satellite-delivered correction services, the OEM7720 ensures globally available, high performance positioning without the need for expensive network infrastructure. Anywhere. Anytime.

SINGLE-BOARD HEADING
The OEM7720 uses a 555 channel architecture and can be configured in multiple ways for maximum flexibility. NovAtel®’s OEM7® firmware provides users with the ability to configure the OEM7720 for their unique application needs. Utilizing a single antenna, the OEM7720 delivers a traditional precise positioning solution. Connecting the optional second antenna allows ALIGN® to compute a high precision heading solution. Increasing the distance between antennas maximizes the heading precision. The OEM7720’s dual antennas will also quickly initialize a SPAN® GNSS+INS system for continuous 3D position, velocity and attitude. NovAtel CORRECT® with RTK delivers centimeter level real-time positioning, or go base-free with centimeter and decimeter PPP solutions using TerraStar corrections.
