SPAN® SPAN-CPT™

SINGLE ENCLOSURE GNSS+INS RECEIVER DELIVERS 3D POSITION, VELOCITY AND ATTITUDE

SPAN: WORLD LEADING GNSS+INS TECHNOLOGY
Synchronous Position, Attitude and Navigation (SPAN) technology brings together two different, but complementary technologies: Global Navigation Satellite System (GNSS) positioning and inertial navigation. The absolute accuracy of GNSS positioning and the stability of Inertial Measurement Unit (IMU) gyro and accelerometer measurements are tightly coupled to provide an exceptional 3D navigation solution that is stable and continuously available, even through periods when satellite signals are blocked.

SPAN-CPT OVERVIEW
SPAN-CPT is a compact, single enclosure GNSS+INS receiver, powered by NovAtel’s world class OEM6® technology. Capable of delivering up to centimetre-level accuracy, customers can choose from a variety of positioning modes to ensure they have the optimal level of accuracy for their application.

The IMU components within the SPAN-CPT enclosure are comprised of Fiber Optic Gyros (FOG) and Micro Electromechanical System (MEMS) accelerometers, maximizing price/performance value. FOGs offer exceptionally long life and stable performance compared with other similar gyro technologies.

SPAN-CPT ADVANTAGES
The tight coupling of the GNSS and IMU measurements delivers the most satellite observations and the most accurate, continuous solution possible. Further, SPAN-CPT is comprised entirely of commercial components, which means cross-border difficulties involved with traditional GNSS+INS systems are greatly minimized.

IMPROVE SPAN-CPT ACCURACY
Take advantage of NovAtel CORRECT™ to receive your choice of accuracy and performance, from decimetre to RTK-level positioning. For more demanding applications Inertial Explorer® post processing software from our Waypoint® Products Group can be used to post-process SPAN data and offers the highest level of accuracy.

FEATURES
- Fiber optic gyro and MEMS accelerometers
- SBAS, NovAtel CORRECT™ with PPP and RTK support
- 100 Hz raw data and solution
- Wheel sensor input for ground applications
- Optional dual antenna

BENEFITS
- Continuous, stable positioning
- Easy to integrate into space constrained applications
- Minimizes import/export issues
- Withstands harsh environments
- Innovative OEM6 technology

SPAN SYSTEM PERFORMANCE

Horizontal Position Accuracy (RMS)
- Single point L1/L2 1.2 m
- NovAtel CORRECT™ SBAS 60 cm
- DGPS 40 cm
- PPP 4 cm
- RTK 1 cm + 1 ppm

Data Rate
- GPS measurement 20 Hz
- GPS position 20 Hz
- IMU measurement 100 Hz
- INS solution Up to 100 Hz

Time Accuracy
- 20 ns RMS

Max Velocity
- 515 m/s

IMU PERFORMANCE

Gyroscope Performance
- Gyro technology FOG
- Output range ±375°/s
- Bias 20°/hr
- Bias stability ±1°/hr
- Scale factor 1500 ppm
- Angular random walk 0.0667°/√hr (max)

Accelerometer Performance
- Range ±10 g
- Bias 50 mg
- Bias stability ±0.75 mg
- Scale factor 4000 ppm

ENVIRONMENTAL

Temperature
- Operating -40°C to +65°C
- Storage -50°C to +80°C

Humidity
- 95% non-condensing

Waterproof
- MIL-STD-810F, 506.4, Procedure I

INCLUDED ACCESSORIES
- Combined I/O and power cable

OPTIONAL ACCESSORIES
- GPS-700 series antennas (dual-frequency required)
- ANT series antennas (dual-frequency required)
- RF cables–5, 10 and 30 m lengths
- Inertial Explorer post-processing software

</table>

1. Typical values. Performance specifications subject to GPS system characteristics, US DOD operational degradation, ionospheric and tropospheric conditions, satellite geometry, baseline length, multipath effects and the presence of intentional or unintentional interference.
2. Specifications subject to change without notice.
3. Export licensing restricts operation to a maximum of 515 metres/second.
4. Supplyed by IMU manufacturer.
5. Dual antenna requires a second NovAtel receiver to be paired with the SPAN-CPT.
6. 1 ppm should be added to all values to account for additional error due to baseline length.
7. Post-processing accuracy using Inertial Explorer processing software.
