NovAtel® is pleased to announce the release of the **SMART7-SI™**, the newest and most advanced addition to the SMART7™ family of antennas.

The SMART7-SI showcases all the features and benefits offered by the **SMART7-S™**, with the addition of Wi-Fi, Ethernet and an integrated NTRIP client. With maximum connectivity, the SMART7-SI enables easy integration into vehicle Wi-Fi or wired IP networks and connections to mobile devices, cellular gateways or other **SMART7™** antennas.

The SMART7-SI also includes NovAtel's best-in-class Global Navigation Satellite Systems (GNSS) + Inertial Navigation System (INS) SPAN® technology that is optimized for the unique dynamics experienced in demanding applications like precision agriculture and machine control. By providing accurate attitude information, terrain compensation and bridging for GNSS signal outages, the SMART7-SI with SPAN can simplify the development of vehicle guidance and steering systems.

All models in the SMART7 family provide exceptional positioning availability using signals from all constellations and frequencies to deliver assured positioning anywhere. The SMART7-SI continues this trend, providing future-proof GNSS and industry-leading availability, accuracy and reliability in a rugged form factor.

For more information on NovAtel products and the latest firmware, please contact your local sales representative. A complete list of NovAtel dealers is available at: www.novatel.com/where-to-buy/dealers.
